

Personal Information

Li Yongping

Born: Nov 1992

Hohai University (211) – Computer Science and Technology

Email: 18516031194@163.com

Job Target: AI Application Engineer | AI Engineering | Intelligent Application Development

Core Strengths

- **AI Engineering & Delivery** – Hands-on experience building RAG applications, AI agents, and function calling from scratch. Able to turn LLM capabilities into practical business solutions. Led the DMC intelligent document platform and an internal AI assistant, both in production with clear business value.
- **Strong Backend Foundation** – 10 years of experience in high-concurrency financial systems, distributed systems, and microservices. Provides stable, high-performance infrastructure for AI services (99.95% availability).
- **Business & Technology Integration** – Good at identifying business pain points and choosing the right tech solutions. Experienced in cross-team collaboration and project management. Reduced labor costs by 60% in a financial business using AI.

Skills

AI Application Development

- AI frameworks: LangChain – practical experience with RAG and agents
- LLM: prompt engineering, function calling – design efficient workflows
- Vector retrieval: embedding models, vector databases (Milvus, Elasticsearch) – built hybrid search
- Languages: Python (AI services, data processing), Java (concurrency, JVM tuning)

Backend & Architecture

- Frameworks & middleware: Spring Boot, Spring Cloud, MyBatis, Kafka
- Data storage: MySQL, Oracle, Elasticsearch, Redis, vector DB
- Cloud & DevOps: Docker, Kubernetes, CI/CD, Prometheus/Grafana
- Architecture: distributed systems, microservices, high availability design

Work Experience

Citi (Jun 2022 – Jun 2025) – AI Application Engineer / Senior Backend Engineer

- **DMC Intelligent Document Platform** – Upgraded a traditional document center to an AI-powered Q&A platform. Built a RAG system using LangChain, LLM, and vector DB to enable document Q&A, semantic search, and recommendation – improved query efficiency by 70%.
- **Document Processing Agent** – Allowed users to trigger backend services (format conversion, summarization, OCR, translation, redaction) with natural language commands.
- **Enterprise Internal Assistant (EIA)** – Integrated developer knowledge base, HR policies, IT support, etc. Used RAG for Q&A and function calling to create tickets, submit leave requests, etc. Reduced internal support tickets by 30%, cut resolution time to minutes.
- **System Monitoring** – Set up full-stack monitoring for AI services (embedding throughput, inference latency) – achieved 99.95% service availability.

Ping An Technology (Jul 2015 – May 2022) – Senior Java Developer / Tech Lead

- **AI Virtual Agent for Loan Signing** – Integrated ASR, TTS, NLP services into a business system. Reduced processing time by 50% and labor cost by 60%.
- **High-concurrency Financial Platform** – Led architecture design for an auto loan signing platform handling tens of thousands of daily transactions. Improved core API response time by 100% through caching and database tuning.
- **Project Management** – As tech lead, coordinated cross-team resources and managed full project lifecycle – 100% on-time delivery.

Key Projects

DMC Intelligent Document Platform (Jun 2023 – Jun 2025)

- *Overview* – Built an intelligent document processing and Q&A platform for operators, handling contracts, IDs, and other customer documents.
- *Tech stack* – LangChain, Python/Java, LLM, Elasticsearch, vector DB, Kubernetes.
- *Contributions*
 1. **RAG Q&A** – Designed RAG pipeline using LangChain for document parsing, chunking, embedding, retrieval, and LLM generation.
 2. **Intelligent Agent** – The agent executes multi-step tasks (e.g., “add new customer” from a blurry ID – enhance image → OCR → validate → write to system → generate e-file). Also supports natural-language data queries (e.g., “contracts with payment cycle >60 days last year”) by converting to structured queries (ES/SQL) and exporting to Excel.
 3. **Engineering** – Solved issues with async vectorization of large document sets and retrieval efficiency.
 4. **Business value** – Increased document automation rate by 40%, reduced manual work.

Enterprise Internal Assistant (EIA) (Jan 2024 – Sep 2025)

- *Overview* – An LLM-powered internal Q&A assistant for developers and staff, answering questions and automating service requests.
- *Tech stack* – LangChain, Python, LLM, vector DB, internal API gateway.
- *Contributions*
 1. **Multi-source knowledge base** – Integrated dev knowledge, HR policies, IT docs, administrative guides. Employees can ask “Who do I contact for an ELK service?” or “How to take annual leave?” and get direct answers.
 2. **Function calling** – Designed functions to call internal APIs (create IT ticket, book a meeting room, submit leave request), turning Q&A into action – “ask, answer, do” in one flow.
 3. **Prompt & agent management** – Created prompt templates for different scenarios; built multi-agent collaboration (tech support agent, IT agent, HR agent) with routing.
 4. **Results** – Reduced internal support tickets by 30%, cut average resolution time from hours to minutes.

Thank you for reading!
